

# Some Thoughts on the Future of GIScience

Luc Anselin

GeoDa Center

School of Geographical Sciences and School of Planning

Arizona State University

<http://geodacenter.asu.edu>

- geospatial technology
- mainstreaming of spatial thinking
- example: spatial econometrics

# Geospatial Technology

- ubiquitous GIS
- new computing paradigms
- geoinformatics

# Spatial Thinking

- disappearance of disciplinary bounds
- mainstream sciences adopt spatial perspective
- daily practice adopts spatial perspective

- drives demand for theory
- how to deal with massive geospatial (space and space-time) information:  
methodological and computational needs
- education and training
- new modes: collaboratories,  
cyberinfrastructure

# Spatial Econometrics

- from the fringe to the mainstream
- spatial aspects in applied work
- who are the drivers
- challenges: theory, methods, computation
